

Power Where Power Cannot Reach

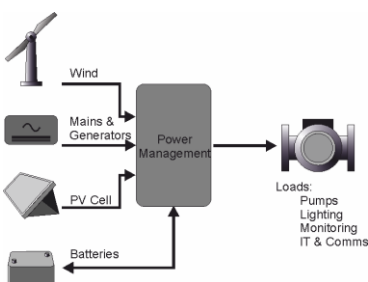

Micro-Power for Remote Sites and Installations

WHAT WE DO

Greeve is a technology innovation company that provides products and bespoke design services for mobile and static electrical power for remote installations and temporary sites.

Greeve can deliver system components and complete power solutions ranging from simple battery back-up supplies to complete micro-power generation and management systems.

Our professional engineering design and integration services enable Greeve to implement systems that fully satisfy customer requirements based on proven reliable technologies.

OUR PRODUCTS

Greeve's standard product range includes Split Charge Isolators, Power Source Control, Power Distribution Units, Networked Power Management, ...

Power Distribution Units

The PDUs include standard AC and DC units supplied in stand-alone, rack-mount or DIN rail options. The range extends from simple industrial to fully militarised systems.

Power Source Controller

The Power Source Controller takes multiple input power sources and routes the most suitable power to the load. It automatically balances the load between the inputs and copes with dynamic power demand surges.

Battery Management

The battery management products include simple split charge controllers, battery load management, battery condition monitoring, and intelligent control of power to prioritised loads.

Complete Systems

Greeve can supply complete micro-power systems ranging from simple back-up battery power to remotely monitored and controlled generator based installations integrating mains and DC supplies.

Applications

Applications for Greeve's range of power products and bespoke systems installations include: supplying power to remote instrumentation; back-up power for small pumping stations; power for IT infrastructure on temporary sites; communications power for military applications ...
